

3M™ PELTOR™ technology can help workers communicate at a safe distance.

3M™ PELTOR™ communication hearing products help maintain connectivity between workers while keeping distance between them in noisy environments. Some of this technology includes:

Situational Awareness

Active listening microphones on the headset means you are always aware of your surroundings.

This gives the user the ability to amplify face-to-face conversation in a noisy environment.

Bluetooth Connection

Bluetooth connectivity to a mobile device or a compatible communication radio.

Provides wireless connection for workers who need to communicate at a worksite

In-built 2-way radio

Our 3M Peltor LiteCom range come equipped with 2-way radios built into the headsets.

This means there is no need for the user to carry a separate 2-way radio for those operating in a radio network.

Voice Activated Mic

Hands-free communication (Vox) allows the user to speak through radio without the need of pressing a button

Transmission using the user's voice means less touching of equipment.

3M™ PELTOR™ smart hearing range provide wireless, hands-free comms at a safe distance to help maintain production and operations – all while protecting your hearing.
