Introducing the NEW 3M™ Cubitron™ II Flexible Grinding Wheel

Built to go the distance. The world's first flexible grinding wheel featuring 3M's revolutionary precision shaped grain (PSG).

The gold standard of grinding performance & productivity. Designed to keep on going - long after other abrasives have called it quits. Cubitron II flexible grinding wheels provide a faster cut and less than half the wear of our next-best flexible grinding wheel.

- **Faster cut** – lets you produce more parts per hour
- **Longer life** – for a lower cost per grind
- **Requires less pressure** – allows the abrasive to do more of the hard work
- **Less vibration** – easier to use, smooth running
- **Cool running** – fewer rejects, less heat stress on heat sensitive metals

To celebrate the launch of this new product into the Cubitron II family, we are offering introductory pricing which is valid until 28 April 2017.
